<u>Compulsory Task One</u>

I am taking the Software Engineering Bootcamp with HyperionDev in order to learn more about Software Engineering as a subject but to also bolster my coding skills to transition myself into a tech / digital role. I chose this Bootcamp as it teaches the complexities of Python in an easily digestible way with support from mentors alongside it.

Python is an immensely powerful tool that is being used by many businesses today to create their applications. Some examples include Instagram, Reddit and Dropbox, some of the biggest companies in the world. Learning Python gives me transferable skills that I can bring into employment, and I will be able to use the skills I have learned to pivot into a Junior Software Engineer role, helping build programs used by millions.

Because I will have this knowledge, I will be more employable for Tech & Digital roles which is fantastic. After I have finished this course, I plan on learning as much as I can using the amazing fundamentals I have been given, and acquire a degree apprenticeship with firms based in Nottingham. EON and Experian are conglomerates that offer this position, so the ability to use the skills I already have will give me a leg up against the competition. Because I will also be working in these firms, I will also use the skills I have learned in this Bootcamp every day in my job which is invaluable.

After I have acquired this apprenticeship, I will use the skills I already have to complete engineering jobs as a consultant on the side, as this will give me an opportunity to flex my skills in a different environment and as a professional representing myself. These opportunities are incredibly lucrative, and I owe it all to this Bootcamp for giving me a head start.

<u>Compulsory Task Two</u>

Hyperiondev

Build Your Brand I: Thinking about a job search

If you're self-employed:
Input the contact details of companies and the business contacts of places you would pitch your services or products to. Also, please fill in the section right at the end of the form.

If you are ready to apply for jobs:
You won't actually be applying in this task, but we would like you to think about the sort of roles you might like to apply for and the sort of companies you might want to work for. Find 2 junior tech roles currently being advertised, ensuring you consider large and small companies as well as tech startups. For each of these, identify the recruiting/hiring managers (possibly the Talent or HR people at each company). Capture the details of each of the 2 roles and contacts in this form. If any of your URLs are greater than 255 characters, shorten them by using bitly.com and paste the shortened version into the form.

If you're not ready to apply for jobs yet or may even be currently employed and not looking for a new role right now but are hoping to achieve a promotion or new role working for your current employer:
We still require you to identify relevant contacts and get into practice should you eventually look for a new role. However, we will NOT reach out to these employers on your behalf. Please also fill in the contact at your current company who would be involved in a change to tech.

Your Personal Details:

Your Name *

Joshua	Rea
First	Last

Your Email Address *
